

Future Com

For the ultimate sense of security.

Future Com's Complete Line of Solutions Partners

AirMagnet Inc. is the leader in security, performance and compliance solutions for wireless LANs. Its innovative products include AirMagnet Enterprise, the leading 24x7 WLAN security and performance management solution, and AirMagnet Laptop Analyzer — known as the "de facto tool for wireless LAN troubleshooting and analysis."

AirTight® Networks is the global leader in wireless security and compliance solutions. AirTight's patented technology protects enterprises from the growing problem of Wi-Fi security threats, while allowing organizations to better manage their WLAN environment and comply with emerging wireless compliance standards (i.e. PCI).

Aladdin Knowledge Systems has spent over two decades providing the most innovative and secure solutions. Its reputation is built upon a comprehensive line of products satisfying the security needs of organizations operating in a world where fast and secure information accessibility is a necessity. These products include HASP®, eToken and eSafe.

Aruba Networks is the leading provider of next-generation network access solutions for mobile enterprise networks. The company's Mobile Virtual Enterprise (MOVE) architecture unifies wired and wireless into one cohesive network access solution based on a user's identity. This gives your enterprise workforce secure access to network resources based on who they are – no matter where they are, what devices they use or how they connect.

Barracuda Networks Inc. combines premise-based gateways and software, cloud services, and sophisticated remote support to deliver comprehensive security, networking and storage solutions. The company's expansive product portfolio includes offerings for protection against email, Web and IM threats as well as products that improve application delivery and network access, message archiving, backup and data protection.

With Blue Coat's WAN Optimization and Secure Web Gateway solutions, you can reduce the cost of building and maintaining a secure WAN infrastructure without compromising application delivery, accelerate the application performance of material and content, and control users, devices, content and enterprise applications centrally to identify non-critical applications and set usage policies, while protecting the WAN against malicious content and applications.

Check Point
SOFTWARE TECHNOLOGIES LTD.

Check Point, an innovator in Internet security, leads the enterprise and personal firewall, data security, and VPN markets worldwide. With a PURE IT security focus, it offers extensive network and data security and security management solutions. Its unified security architecture integrates core security technologies to protect business communications and resources.

Cisco enables people to make powerful connections - whether in business, education, philanthropy, or creativity. Cisco hardware, software, and service offerings are used to create the Internet solutions that make networks possible - providing easy access to information anywhere, at any time. The tradition of its engineers being leaders of innovation continues with industry-leading products and solutions.

Cisco acquired IronPort Systems in June, 2007. Now a part of the Cisco product family, IronPort email and web security appliances protect organizations of all sizes against spam, viruses, malware and other Internet threats – combining powerful performance with preventive and reactive security measures that are easy to deploy and manage.

Computer Associates™

Computer Associates, Inc. has over 30 years of experience in providing business consulting, industry-specific software development and professional services in several commercial and industrial environments. CAI has worked closely with many leading companies to apply advanced, industry-specific software concepts and technology innovations that enhance our client's business performance and profitability.

Founded in 1973, Compuware provides software, experts and best practices to ensure applications work well and deliver business value. Compuware solutions optimize application performance across the Enterprise and the Internet for leading organizations around the world, including 46 of the top 50 Fortune 500 companies and 12 of the top 20 most visited U.S. web sites.

Crossbeam Systems®, Inc. transforms the way enterprises, service providers, and government agencies architect and deliver security services. The basis of our solution is the Next Generation Security Platform, a highly scalable hardware platform that facilitates the consolidation, virtualization, and simplification of security services delivery, while preserving customers' choice of best-of-breed security applications.

Data Domain deduplication technology has changed the economics of storage to help you build a reliable, efficient and cost-effective data protection architecture. Enterprises of all sizes are using Data Domain deduplication storage to reduce backup costs and simplify data recovery. Data Domain solutions provide proven products, technologies and partnerships to address your specific data storage challenges.

Digital Defense serves clients across a broad range of industries, ranging from small financial institutions to global Fortune 1000 enterprises. The Frontline™ Client Portal provides these clients with instant access to security assessment applications, test results, and remediation progress reporting -- so they can ensure proof of compliance, business service availability, and the highest levels of operational efficiency.

ExtraHop Networks, a technology startup gaining momentum in the Application Delivery Assurance market, delivers innovative solutions to ensure that business-critical transactions do not fail. The ExtraHop solutions provide real-time analysis of applications to improve customer experience and quality of service while reducing IT costs.

F5 Networks is the global leader in Application Delivery Networking. F5 provides solutions that make applications secure, fast, and available for everyone. By adding intelligence and manageability into the network to offload applications and optimize the data storage layer, F5 extends the power of intelligent networking to all levels of application delivery.

FireMon is a successful and rapidly growing security software developer of enterprise management solutions. FireMon's founding was a direct result of meeting customers' needs with innovatively engineered software solutions. Our industry leading firewall management product, FireMon Security Manager, has been recognized by industry experts and emulated by competitors since we invented the firewall management space in 2001.

ForeScout's clientless network access control (NAC) solutions enable customers to gain complete control over network security without disrupting end-user productivity. Its flagship product, CounterACT, combines NAC and signatureless intrusion prevention in a single network appliance that interrogates and controls access of every device and seamlessly integrates with any existing IT infrastructure.

Gigamon delivers intelligent data access solutions to enhance network monitoring of data centers, service providers and enterprise networks. We pioneered and patented the technology for companies to securely access and gain complete visibility to all their data. We have deployed thousands of units in more than 40 countries and are confident we can enhance your network monitoring capabilities.

IBM Internet Security Systems products and services provide preemptive protection for networks, desktops and servers against both known and unknown threats. ISS offerings are based on the proactive security intelligence of the IBM X-Force research and development team. IBM Internet Security Systems is the trusted security advisor to thousands of the world's leading businesses and governments.

Imperva is the market leader in Application Data Security and Compliance. More organizations trust Imperva for the activity monitoring, real-time protection and risk management of their critical business data and applications than any other vendor. Only Imperva solutions are backed by the Imperva Application Defense Center (ADC), the industry's only security research team dedicated to business applications and databases.

Infoblox pioneered the development of core network services appliances, which deliver utility-grade domain name resolution (DNS), IP address assignment and management (DHCP/IPAM), authentication and authorization (RADIUS), configuration (TFTP/HTTP), and network time (NTP). Infoblox solutions control and automate the core services that drive all networks and applications.

Juniper Networks high-performance network infrastructure helps businesses create a responsive and trusted environment for accelerating the deployment of services and applications over a single network. With Juniper, businesses can capitalize on opportunities to innovate, grow and strengthen their business and answer the challenge of complicated, legacy networks with high-performance, open, flexible solutions that enable consolidation and delivery, rapid deployment and scaling, protection and recovery, and operational improvements.

Kaspersky Lab is emerging as the world's largest privately held anti-malware company. Founded in 1997, the company offers its products and technologies to industry and consumers in virtually every country around the globe. Today, more than 250 million users worldwide are protected by our technologies. Every week, we add more than 100,000 new users.

McAfee proactively secures systems and networks from known and as yet undiscovered threats worldwide. Home users, businesses, service providers, government agencies, and partners all trust McAfee's unmatched security expertise and comprehensive proven solutions to effectively block attacks and prevent disruptions. McAfee's portfolio comprises desktop and server system protection and network protection products. The system protection products enable IT managers, desktop support managers and business application managers to ensure the availability and security of desktop and server systems as well as applications. The network protection products ensure the availability of network infrastructure at remote sites and branches via WAN.

M86 Security is the largest provider of Secure Web Gateways and the largest independent provider of web and e-mail content security in the world. Four leading technology companies have merged to become a full-service, single source provider of Web and e-mail gateway security, encryption and DLP solutions. We don't just "major" in one and "minor" in the others.

NetScout Systems, Inc., growing from the acquisitions of Sniffer and Network General, is the leading provider of integrated network and application performance management solutions for organizations worldwide. Through Sniffer and nGenius technologies, NetScout enables customers to maximize the performance and efficiency of applications and content delivered across globally distributed networks.

Network Instruments strives to provide outstanding network troubleshooting and analysis solutions at competitive prices. Centered on the company's unique, distributed network architecture (NI-DNA™), each product functions as part of a seamlessly integrated holistic management solution. The Observer®, its flagship product, is more than a protocol analyzer, boasting powerful application analysis, expert analysis, stream reconstruction, and trending.

At NIKSUN, our mission is to build the next-generation technology that revolutionizes the way networks and services are secured, protected and managed. Understanding the complex interactions to ensure that the network, applications and services are robust and secure requires a revolutionary approach, which NIKSUN was the first in the industry to build with its NetVCR and NetDetector products.

OPNET Technologies, Inc. is a leading provider of solutions for managing applications and networks. OPNET's best-in-class solutions address: application performance management; network engineering, operations, and planning; and network R&D. OPNET solutions have been operationally proven in thousands of customer environments worldwide, including corporate and government enterprises, defense agencies, network service providers, and network equipment manufacturers.

Palo Alto Networks has created a next-generation firewall that takes an application-centric approach to traffic classification to enable unmatched application visibility and policy control. Based upon an innovative traffic classification technology called App-ID, the PA-4000 Series accurately identifies and controls applications regardless of port, protocol, SSL encryption or evasive tactic used.

PGP Corporation is the leader in email and data encryption solutions for enterprise data protection. Over the years, PGP technology has earned a reputation for innovative, standards-based, trusted solutions. Customers depend on PGP solutions as part of a regulatory and audit compliance solution, to protect confidential information, secure customer data, and safeguard companies' brands and reputations.

PresiNET Systems Corp. provides network intelligence solutions to improve network security, performance, and efficiency to small businesses and large enterprises. The company offers TOTAL VIEW ONE, an enterprise class suite of network management tools that track bandwidth and connections to provide reports and investigative tools for securing performance issues, unauthorized network use, and rouge applications.

Proofpoint provides unified email security and data loss prevention solutions for enterprises, universities, government organizations and ISPs to defend against inbound threats such as spam and viruses, prevent leaks of confidential and private information across all protocols, encrypt sensitive emails and analyze messaging infrastructures.

Q1 Labs is a global provider of high-value, cost-effective security information and event management (SIEM) products. QRadar integrates log management, network behavior analytics, and security event management into a total security intelligence solution. It provides users with crucial visibility into what is occurring with their networks, data centers, and applications to better protect IT assets and meet regulatory requirements.

Radware is the global leader in integrated application delivery and application security solutions for business-smart networking. The company assures the complete availability, performance, and security of business-critical applications for enterprises and carriers worldwide.

Resilience delivers data security solutions with the DeepAUTOMATION and real availability demanded by busy IT departments for critical applications. Backed by the Resilience Continuous Secured Ownership warranty and industry-leading support, Resilience's high performance appliances deliver zero downtime; enable 15 minute provisioning and automation of key tasks like Monitoring and Recovery, and lower operating costs.

Riverbed Technology is the IT performance company. Riverbed provides the only comprehensive WAN optimization solution to a host of severe problems that have effectively prevented enterprises from sharing applications and data across wide areas. By wide area, we mean anywhere in the world.

RSA is the premier provider of security solutions for business acceleration. As the chosen security partner of more than 90 percent of the Fortune 500, RSA helps the world's leading organizations succeed by solving their most complex and sensitive security challenges. In September 2006, RSA joined forces with EMC Corporation and Network Intelligence to form the Security Division of EMC.

ScriptLogic Corporation, a wholly owned subsidiary of Quest Software, is a recognized leader in the management, monitoring and support of desktops, servers and networks. ScriptLogic's award winning solutions benefit 28,000 customers worldwide in the areas of desktop, help desk, active directory, server and network management.

SecureWorks is now a part of Dell. Dell SecureWorks is recognized as an industry leader, providing world-class information security services to help organizations of all sizes protect their IT assets, comply with regulations and reduce security costs. To learn more, visit www.secureworks.com.

Sipera Systems is the worldwide market leader in communications security solutions that simplify and accelerate the adoption of VoIP and Unified Communications (UC). As the only Common Criteria certified security appliance for UC, the UC-Sec is the choice of enterprises and service providers who want to migrate to the new generation of communications with lower risk and higher return on investment.

SolarWinds provides powerful and affordable IT management software to customers worldwide – from Fortune 500 enterprises to small businesses. We believe that the IT pros that use our products everyday should be excited about them. That's why we put our users first in everything we do, and strive to deliver powerful functionality while making their jobs easier. We call it "user-centric software."

SonicWALL is a recognized leader in comprehensive information security solutions. SonicWALL solutions integrate dynamically intelligent services, software and hardware that engineer the risk, cost and complexity out of running a high performance business network. SonicWALL solutions are successfully deployed across small, medium and distributed enterprise environments around the world, including government, healthcare and retail point-of-sale installations.

Trusted by 100 million users and endorsed by industry analysts as a leader, Sophos provides a full range of endpoint, encryption, email, web and NAC solutions that are simple to deploy, manage and use.

Sourcefire is a world leader in intrusion prevention, transforming the way organizations manage and minimize network security risks and threats. Sourcefire's groundbreaking 3D approach—Discover, Determine, Defend—is a unified defense system that combines intrusion and vulnerability management technologies to provide customers with some of the *most effective*, real-time, network security available.

Symantec is a global leader in infrastructure software, enabling businesses and consumers to have confidence in a connected world. The company helps customers protect their infrastructure, information and interactions by delivering software and services that address risks to security, availability, compliance and performance.

TippingPoint is the leading provider of network-based intrusion prevention systems for enterprises, government agencies, service providers and academic institutions. TippingPoint is the only intrusion prevention system to offer VoIP security, bandwidth management, Peer-to-Peer Protection, and default "Recommended Settings" to accurately block malicious traffic automatically upon installation without tuning.

Trend Micro Incorporated is a global leader in network antivirus and Internet content security software and services. The company led the migration of early virus protection from the desktop to the network server and the Internet gateway. Trend Micro continues to advance its comprehensive approach to management of content security threats into the Internet cloud.

Tripwire is the recognized leader of configuration audit and control software. Tripwire Enterprise is the first to combine configuration change auditing with configuration assessment, helping IT organizations automate compliance across the data center. By determining that each change is authorized, within policy and compliant, Tripwire ensures the organization achieves continuous operational, regulatory and security compliance.

VASCO is a world leader in strong authentication and e-signature solutions, specializing in online accounts, identities and transactions. As a global software company, VASCO serves a global customer base, including more than 1,500 international financial institutions. In addition to the financial sector, VASCO's technologies secure sensitive information and transactions for the enterprise security, e-commerce and e-government industries.

VMware is the global leader in virtualization solutions from the desktop to the data center. Customers of all sizes rely on VMware to reduce capital and operating expenses, ensure business continuity, strengthen security and go green. With 2007 revenues of \$1.33 billion, more than 100,000 customers and nearly 14,000 partners, VMware is one of the fastest-growing public software companies.

WatchGuard builds affordable, all-in-one network and content security solutions to provide defense in depth for corporate content, networks and the businesses they power. WatchGuard's award-winning extensible threat management (XTM) network security solutions combine firewall, VPN and security services to protect networks from spam, viruses, malware and intrusions.

Websense, the global leader in integrated Web, messaging, and data security, enables its customers' success by protecting essential information in the Web 2.0 world. Only Websense solutions keep business information safe and employees productive on any network, anytime and anywhere. Websense is Essential Information Protection.

Zscaler is the industry-first multi-tenant SaaS security provider. Zscaler shifts focus away from the server to the user, protecting companies from the new generation of security threats. Through our global, in-the-cloud infrastructure, Zscaler enforces business policy and mitigates risk, provides the end user with a rich Internet experience, protects users at any place, on any device, and delivers twice the functionality at half the price.
